Issue report: Page doesn't simulate user and upload live stream.

After simulating a user, the upload doesn't start so the video traffic is not measured. In other words, the page can't find sources streaming the same live. Only the traffic measured through CDN is measured.

I told the customer we should fix the issue in a couple days because I know your team of developers can work things out in a day and I gave another day just in case of contingency (someone gets sick or is on leave, the problem is bigger than it looks...).

Thank you,
Serina.
